

Problema 1

$$dE_y = \mathbf{I} dl \cos \theta / 4 \pi \epsilon_0 R^2 \quad dl = R d\theta \quad E_y = (\mathbf{I} / 4 \pi \epsilon_0 R^2) \text{ INTEGR} (R \cos \theta d\theta)$$

$$E_y = -(\mathbf{I} / 2 \pi \epsilon_0 R) \sin \theta \quad E_x = 0$$

Problema 2

$$Bs = \mathbf{m} n I = \mathbf{m} n I_0 \sin \omega t \quad N \mathbf{F} = N B \mathbf{p} R^2 = N \mathbf{p} R^2 \mathbf{m} n I_0 \sin \omega t$$

$$E2 \mathbf{p} R = N \mathbf{p} R^2 \mathbf{m} n I_0 d(\sin \omega t) / dt = N \mathbf{p} R^2 \mathbf{m} n I_0 \omega \cos \omega t \quad E = 1/2 (N R \mathbf{m} n I_0 \omega \cos \omega t) = 16.9 \cos \omega t \text{ V/m}$$

$$\mathbf{e} = d(N \mathbf{F}) / dt = N \mathbf{m} n I_0 [\sin \omega t dA / dt + A \omega \cos \omega t] \quad \mathbf{e}_{5s} = 9,262 \text{ V}$$
