**Prova scritta di Fisica Generale II**  
**Settembre 2002**

***Problema 1B***

$$\mathbf{S}_1 = Q/4\mathbf{p}R_1^2 \quad \mathbf{S}_2 = -Q/4\mathbf{p}R_2^2 \quad \mathbf{S}_3 = Q/4\mathbf{p}R_3^2$$

$$E_1 = \mathbf{S}_1/\mathbf{e}_0 \quad E_2 = \mathbf{S}_2/\mathbf{e}_0 \quad E_3 = \mathbf{S}_3/\mathbf{e}_0$$

$$V_3 = (\mathbf{S}_3 R_3)/\mathbf{e}_0 \quad V_2 = (\mathbf{S}_3 R_3)/\mathbf{e}_0 = V_3 \quad V_1 = (\mathbf{S}_1 R_1 - \mathbf{S}_2 R_2 + \mathbf{S}_3 R_3)/\mathbf{e}_0$$

$$V_1 - V_3 = (\mathbf{S}_1 R_1 - \mathbf{S}_2 R_2)/\mathbf{e}_0$$

***Problema 2B***

$$F = IlB \quad dV/dt = -iBl/m = -(i_0 Bl \sin \mathbf{w})/m \quad V = V_0 \cos \mathbf{w} = (i_0 Bl \cos \mathbf{w}) m \mathbf{w}$$

$$V_0 = i_0 Bl/m \mathbf{w} \quad B = 0.5 \text{ T}$$

$$Ldi/dt = d\mathbf{F}dt = BlV \quad L = BlV_0/i_0 \mathbf{w}$$
